**Windows (macOS below)**

1. Install composer
    - Go to getcomposer.org/download
    - Download and run Composer-Setup.exe

2. Point to MAMP's PHP when installing
    - The installer will ask you to locate php.exe. Don't let it search automatically, point it directly at MAMP's copy, something like:

      C:\MAMP\bin\php\php8.x.x\php.exe

    - Finish the rest of the installer with the default options, then close and reopen Command Prompt or PowerShell or VSCode so it picks up the new settings.

3. Open VSCode -> Terminal
    - Verify that composer is installed by running:

      composer --version

    - You should see something like "Composer version 2.10.3 2026-08-27 13:34:23"

4. Install PHPMailer
    - In VSCode terminal make sure you are in the project directory (path\to\IMS-Project)
    - Run:

      composer install

    - You should see a vendor folder in the project

5. In mailer.php
    - On line 24
      $mail->Password = "changepassword"; *// Generated app password from gmail*
    - Change password to the line given in the group chat.

**macOS**

1. Check if you have Homebrew. In terminal run:

   brew --version

   - If not -> install https://brew.sh/

2. Install composer.
   - Open projectfolder in VSCode
   - Open terminal
   - Run:

   brew install composer

3. Verify that composer is installed by running:

   composer --version

   - You should see something like “Composer version 2.10.3 2026-08-27 13:34:23”

4. Install PHPMailer
   - In VSCode terminal make sure you are in the project directory (path\to\IMS-Project)
   - Run:

   composer install

   - You should see a vendor folder in the project

5. In mailer.php
   - On line 24
     $mail->Password = "changepassword"; *// Generated app password from gmail*
   - Change password to the line given in the group chat.
